

FIVE ROUND LOADING AND MARK I RUGER

- To make a five round loader, modify the rear half of the loader as shown. Cut at 1 1/4" and 2 7/8" Reassemble the loader and drill two new 1/8" holes (the same as original) to remount the section with the adjusting screw as pictured below. (It can be moved back to the original position later to load 10 rounds.)
- For the MARK I nine shot magazine with the button on the left side, saw at 1 1/4" and at 1 5/8" to remove only 3/8" of material. Drill and remount the adjusting screw section just like the 5 round loader above.

- If you have a MARK I nine shot magazine with the follower button on the right side, **YOU DO NOT HAVE TO DISASSEMBLE THE LOADER AND DO THE ABOVE MODIFICATION.**

Just carefully deepen this notch a little at a time until your magazine is fully inserted, depressing the ball inside the Cliploader to release the bullets. If a 10th round is being released and falls out when you remove your magazine, deepen the notch slightly more. The 9th round should just slide under the feed lips of your magazine.
